Environmental Policy:

As part of our environmental commitment to save our planet, we at KM Tubular Industries are committed to ensuring that a high standard of awareness and training in environmental matters is a priority.

We encourage and give preference to suppliers whose products clearly acknowledge, display environmental profiles, certificates, labels, and are locally produced.

We also administer the following:

- Recycle all Cardboard, paper waste and Steel, minimizing the production of waste/ landfill through the method of "Reduce, Reuse, Repair and Recycle".
- Minimize the use of Solvents and prefer to use water based, bio-de gradable alternatives to chemicals where there is an option.
- We use Enviro Bubble wrap for packaging our products as it uses up to 40% recycled content.
- The use of Timber products that are all sourced from sustainable managed forests, which include "the environmentally responsible procurement of wood by conserving the natural environment and actively protecting Australia's flora and fauna."
- Use of "Mod wood" that is eco-friendly, Mod Wood is an Australian made and owned composite product made essentially from a mixture of ground sustainable wood waste and recycled plastic milk bottles. Mod Wood products contain no formaldehydes.
- We have Systems in place for Management and Staff, as a team, to be constantly made aware of their "enviro responsibilities" during their day-to-day tasks
- Monitor, Minimize, and efficient use electricity, water, oil, wood, petrol and Diesel.
- Chrome plating and polishing of all steel follows strict guidelines of chemical bath waste disposal through a trade waste license covered by the EPA.
- We are also continually working towards getting our GECA and Green tick approval granted.
