

umbilical ZERO

“One man’s rubbish, another man’s treasure”

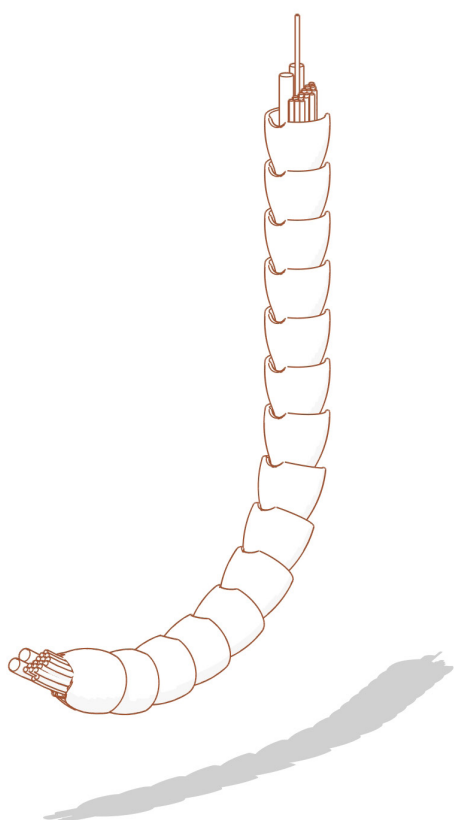

The average life of a commercial office fit-out being only 5 years, we end up with a large amount of imported virgin plastic components going directly to our landfills

Why do we not use a valuable resource that is available in abundance right here, instead?

High-density polyethylene is a pliable, yet durable material that is chemically inert. This resin offers the right amount of flexibility for soft wiring management applications, such as our ZERO umbilical.

Lead time: 2-4weeks

Origin: Sydney

ZERO is a fully circular product and is covered by return to manufacturer scheme.

DIMENSIONS

Length: 700, 1000, 2700mm and custom.

MATERIALS

High-density polyethylene
